Telelogic Secures Seven-Year US\$3.4 Million Agreement with Australian Defense

- Customer Standardizes on Telelogic DOORS® for Requirements Management -

MALMÖ, Sweden – June 26, 2002 – Telelogic (Stockholm Exchange: TLOG), the leading global provider of solutions for advanced software and systems development, today announced that it has signed a seven-year agreement worth US\$3.4 million with Commonwealth of Australia (the Australian Federal Government) for use of Telelogic DOORS by the Australian Department of Defence (Defence). Defence will standardize on DOORS for requirements management and will implement Telelogic's market leading product throughout the department. The agreement also provides options to purchase additional Telelogic products and services.

"This international transaction further demonstrates the feature-rich, industrial strength functionality of DOORS and why it is the industry leading tool for all vertical sectors needing robust requirements management solutions," said Anders Lidbeck, president and CEO of Telelogic. "The agreement also validates that companies in the defense industry are increasingly embracing our solutions for complex real-time systems and software development."

By implementing DOORS, it is possible for individuals to quickly and easily determine where each software application requirement originated, its rationale, the associated cost and trade-off studies, and other requirements that could be impacted by any change. As such, DOORS enables users to conduct a gap analysis between requirements documents to ensure consistency and continuity across the requirements spectrum.

About Telelogic DOORS

Telelogic DOORS is the world's leading requirements management tool according to the latest Standish Group industry report entitled, "What are your requirements? 2000." DOORS is a multi-platform, enterprise-wide requirements management tool designed to capture, link, trace, analyze and manage a wide range of information to ensure a project's compliance with specific requirements and standards. Telelogic recently released DOORS version 6.0, which adds Enterprise Change Proposal Management (ECPS) for configurable and scalable requirements change control. DOORS 6.0 also makes it even easier to manage both textual and pictorial requirements through enhanced OLE management. DOORS enables users to gather, trace and manage all requirements established for a development project, ensuring that the resulting product meets all defined customer needs.

About Telelogic

Founded in 1983, Telelogic® (www.telelogic.com) is the leading global provider of solutions for advanced software and systems development. The company's automated application lifecycle solution includes integrated best-in-class software and professional services for requirements management, change and configuration management, development, testing, and documentation. Telelogic enables organizations to improve quality and predictability, while reducing time-to-market and overall costs in software and systems development. Built on an open architecture that ensures interoperability with other leading third-party solutions, Telelogic's products are based on international standardized languages and notations. Telelogic participates in 3GPP, Bluetooth SIG and OMG to create future communication technologies and visual software development languages.

Headquartered in Malmö, Sweden with U.S. Headquarters in Irvine, California, the company has more than 1,000 employees worldwide. Customers include Airbus, Alcatel, BMW, Boeing, BT, DaimlerChrysler, Deutsche Bank, Ericsson, Lockheed Martin, Lucent Technologies, Motorola, NEC, Nokia, Philips and Siemens.
