

B.KAMINS, CHEMIST

SKINCARE FOR THE MENOPAUSE YEARS

Ben Kamins, a preeminent pharmaceutical and dermatological chemist, has been developing medicines for physicians and dermatologists all across North America for over 30 years.

Kamins was the first to address the special needs of peri-menopausal and menopausal skin. The creation of the Menopause Cream and the Menopause Body Lotion using his patented ingredient Bio-Maple™ Compound, marked the first product of its kind specifically targeted to hormone-deprived skin.

Kamins originally formulated the product for his wife and after seeing the difference it made to the appearance of her skin he realized that many hormone deprivation skin symptoms could be treated without prescription medicines.

Innovative products and prescription-worthy results: Kamins, while on a winter fishing trip in Northern Canada, noticed that the hearty maple trees surrounding the lakes were the only plant life to survive the brutal weather. Upon further laboratory investigation, Kamins discovered that the serum from these maples was especially rich in life-sustaining materials like polysaccharides, anti-oxidants, minerals, and natural preservatives and alpha-hydroxy acid. He purified the maple serum and the patent pending Bio-Maple™ Compound was born.

What is it?

Bio-Maple™ is a synergistic naturally occurring balance of anti-oxidants, vegetable hormones, polysaccharides, minerals and AHA acids extracted and purified from selected Canadian maple trees (acer saccharum).

What does it do?

Rehydrates: In perfect, undamaged skin, the top layer (stratum corneum) is a protective barrier which traps water and prevents excess moisture loss. Environmental stresses including sun damage, pollution, and second hand cigarette smoke, as well as the skin's normal aging process, cause a breakdown in this protective barrier. This often leads to changes in color, fine lines and wrinkles, dry skin, excessive flaking and a more aged appearance. Bio-Maple™ physiologically rehydrates, and helps repair the skin by performing two gentle synergistic actions:

- absorbs and stores moisture from the environment (hygroscopic action)
- lifts water from the inner layers of the epidermis to the top layers (osmotic action)

The benefits include:

- increased hydration and skin plumpness
- increased smoothness and elasticity
- increased suppleness, softness and resiliency
- turnover of new cells and enhanced luminosity
- helps to visibly diminish the appearance of fine lines and wrinkles

Menopause Skin Cream: Salvation in a jar. This dermatological cream helps to minimize the fluctuation and trauma skin experiences during menopause. A unique formula that acts as a reservoir to provide essential nutrients and moisture, compensating for water loss that occurs during and after menopause. Contains potent combination of Bio-Maple™, Episphere-Blue and Profusion Ceramide that soothe and cool.

£82

Menopause Body Lotion: A remarkable combination of ingredients helps calm and soothe symptoms associated with the fluctuations of hormone-deprived skin. A unique water-binding system helps hold nutrients and moisture in the skin, which are commonly lost during menopause, resulting in smoother skin. Contains Episphere-Blue, Profusion Ceramide and Bio-Maple™ technologies to dramatically soothe and cool.

£28

Menopause Facial at SPace.NK, Westbourne Grove, London, W11

Canadian chemist Ben Kaminsky created his acclaimed bio maple compound based cream to help his wife better cope with the skin problems she encountered during menopause. this relaxing and therapeutic treatment was developed as the next step to deal with many of the changes in complexions that occur prior to, during and after the menopause. It promotes noticeable firming, a smoother complexion and cools traumatised skin. The skin is left radiant and tension free. 1hr £50
