Telelogic Synergy™ Integrated With Visual Studio .NET To Ease Application Development

- Solution Enables Users to Unify Distributed Development Teams -

MALMÖ, Sweden – August 1, 2002 – Telelogic (Stockholm Exchange: TLOG), the leading global provider of solutions for advanced systems and software development, today announced support for Microsoft Visual Studio .NET.

As a member of the Microsoft Visual Studio .NET Integration Program (VSIP), Telelogic has integrated Telelogic Synergy and ActiveCM™ with Microsoft Visual Studio .NET. This seamless integration provides development teams with the power of Telelogic Synergy's enterprise-class configuration management solution from the Microsoft Visual Studio .NET tool suite.

Telelogic Synergy, named the most advanced change and configuration management system on the market by Yphise in its latest industry report, tracks changes and ensures configuration integrity during a software product's lifecycle. This configuration integrity enables parallel and distributed teams to improve productivity and quality. ActiveCM, an optional add-on feature available with Synergy v 6.2, is a complementary user interface that hides and automates approximately 90% of typical user/CM system interactions. By making the system transparent, all the benefits of CM can be easily and cost-effectively realized.

Microsoft Visual Studio .NET is designed for building next-generation Web applications and XML Web services for the Microsoft Windows platform. By allowing applications to share data over the Internet, XML Web services enable developers to assemble applications from new and existing code, regardless of platform, programming language, or object model.

Scalability and Ease of Use

Telelogic Synergy provides the full-lifecycle software development capability required by Microsoft Visual Studio .NET, without forcing developers to switch from tool to tool to satisfy change and configuration management requirements.

"Microsoft is pleased to see Synergy supporting Visual Studio .NET," said Sam Henry, technical product manager for the Developer Platform and Evangelism Division at Microsoft Corp.

"Telelogic's Synergy makes configuration management easy and efficient for distributed teams.

“Our vision for Telelogic’s configuration management solutions is to make Synergy a key enterprise service,” said Ingemar Ljungdahl, chief technology officer for Telelogic. “Configuration management is as important as a bank repository, and Synergy is the secure vault of all company software assets.”

Additional information on Telelogic Synergy with *ActiveCM*[™] is available at <http://www.telelogic.com>.

Availability

ActiveCM is currently shipping and is available for Windows NT/2000/XP. *ActiveCM* requires an installation of Telelogic CM Synergy 6.2.

About Telelogic Synergy

Telelogic Synergy[™] is an integrated tool family for change and configuration management, which provides lifecycle control for a company’s software development assets. Telelogic Synergy enables superior quality advanced software and systems to be developed faster and at reduced cost.

About Telelogic

Founded in 1983, Telelogic® (www.telelogic.com) is a leading global provider of solutions for advanced systems and software development. The company’s automated application lifecycle solution includes integrated best-in-class software and professional services for requirements management, change and configuration management, development, testing, and documentation. Telelogic enables organizations to improve quality and predictability, while reducing time-to-market and overall costs in systems and software development. Built on an open architecture that ensures interoperability with other leading third-party solutions, Telelogic’s products are based on international standardized languages and notations. Telelogic participates in 3GPP, Bluetooth SIG and OMG to create future communication technologies and visual software development languages.

Headquartered in Malmö, Sweden with U.S. headquarters in Irvine, California, the company has more than 900 employees worldwide. Customers include Airbus, Alcatel, BMW, Boeing, BT, DaimlerChrysler, Deutsche Bank, Ericsson, Lockheed Martin, Lucent Technologies, Motorola, NEC, Nokia, Philips and Siemens.
