Telelogic Receives Major Consultancy Contract from German Automotive Manufacturer

MALMÖ, Sweden - September 16, 2002 - Telelogic (Stockholm Exchange: TLOG), the leading global provider of solutions for advanced systems and software development, today received a professional services contract worth Euro 541,000 from a major German automotive manufacturer. This new agreement is a follow-on contract to the Euro 1.46 million contract Telelogic received from the same customer in October last year. Under the agreement, Telelogic will deliver professional services over a 4-month period.

In the project, Telelogic will work with the customer to develop an advanced information and entertainment system for the driver and the passengers in the car. The system will be based on MOST (Media Oriented System Transport), a global standard used throughout the automotive sector for data communication of multimedia and telematics applications. In this second phase of the project Telelogic will deliver professional services based on Telelogic development tools, to enhance the simulation and testing facilities of the customer's project environment.

“Working with key customers in a number of selected industry segments forms the basis of Telelogic’s global sales strategy. This contract is a good example of the rewards of focus and also the powerful combination delivered through our development tools and highly specialized professional services. We are confident that focus is the key to success in today’s tough climate for general consulting,” said Anders Lidbeck, President and CEO of Telelogic.

“The increasing complexity of automotive in-car solutions leads to exponential growth in implementation and testing efforts. Telelogic's solutions, based on best-in-class products and outstanding expertise, help to handle the different phases of complex projects more efficiently. The customer has been very satisfied with the work delivered by Telelogic in the first phase of the project and this, together with our comprehensive simulation facilities and structured approach to component and integration testing were strong arguments for the decision to select Telelogic again,” said Ulf Pansa, Vice President Business Segment Automotive, Telelogic.

About Telelogic

Founded in 1983, Telelogic® is the leading global provider of solutions for advanced systems and software development. The company's integrated best-in-class software tools, supported by professional services, enable companies to automate their entire development lifecycle, resulting in improved quality and predictability with reduced time-to-market and overall costs. To ensure interoperability with third-party tools, Telelogic's products are built on an open architecture and standardized languages. As an industry leader and technology visionary, Telelogic is actively

involved in shaping the future of advanced systems and software development by participating in industry organizations like 3GPP, ETSI, INCOSE, ITU-T, MOST, OMG and others.

Headquartered in Malmö, Sweden with U.S. headquarters in Irvine, California, Telelogic has more than 900 employees worldwide. Customers include Alcatel, BAE SYSTEMS, BMW, Boeing, DaimlerChrysler, Deutsche Bank, Ericsson, General Motors, Lockheed Martin, Motorola, NEC, Nokia, Philips, Siemens and Thales.
