

ProAct strengthens Swedish consulting area by acquiring the business within SystemKompetens KB

ProAct Datasystem AB, a subsidiary of ProAct IT Group AB, today announced that they have acquired the business in SystemKompetens KB. SystemKompetens KB supplies technical expertise within the field of IT-consulting. The acquisition comprises eight consultants.

SystemKompetens KB have been active in the market for eight years, offering specialised services in the database- and application fields. The consulting business offers primarily strategic services with focus on system administration, database administration, integration and technical project management.

The eight consultants will be integrated in the present consulting business within Professional Services in ProAct Datasystem AB.

Christer Elfström, Managing Director of SystemKompetens and Peter Javestad, ProAct Professional Service manager, will jointly be responsible for optimal integration between the two companies. Mr Elfström will thereafter become a part of ProAct Professional Service and share his time between the selling- and consulting business.

–We strongly look forward to this merger, says Christer Elfström, through our integration with ProAct we can tap into the possibilities and network of a large company and have all the prerequisites to further develop our existing services, making sure that SystemKompetens present customers are secure in their choice of a supplier of advanced IT-services.

–SystemKompetens strongly complements our consulting business, resulting in broadened competence and further possibilities for us to take on a bigger entirety in a project. Something that should be interesting for all our customers, says Henrik Wahl, Managing Director of ProAct Datasystem AB.
