

PRESS RELEASE

Mimer SQL Mobile Database Management System to be Available on Symbian OS

Uppsala, Sweden, June 25, 2003 -- Upright Database Technology today announced it will deliver the Mimer SQL Mobile database management system on Symbian OS™, the open global industry standard operating system for advanced mobile phones. Symbian licenses Symbian OS to the world's leading handset manufacturers including Motorola, Nokia, Samsung, Siemens and Sony Ericsson. In total, Symbian OS licensees account for more than 80% of worldwide mobile phone sales.

"It's with large confidence we enter into this market", says Stefan Eck, Product Manager Upright Database Technology. "The complete DBMS functionality and efficiency of Mimer SQL Mobile available on Symbian OS is unique and can only be compared to our competitors' expensive offerings for high-end platforms", concludes Stefan Eck.

Mimer SQL Mobile for Symbian OS is a full-fledged DBMS server with support for data compression, multimedia data (e.g. MMS) and standard interface connectivity. The product also includes features like multi-user database access and 100% industry standard SQL -- full transactional support, stored procedures and triggers -- features otherwise only found in high-end DBMSs.

"We are very pleased with Upright's availability of Mimer SQL Mobile DBMS for Symbian OS," said Ian Weston, VP Developer Partnerships of Symbian. "Applications developers working with Symbian OS will now have access to a very powerful yet cost effective tool."

Mimer SQL Mobile will be available on Symbian OS in the third quarter of 2003.
