

# PRESS RELEASE

## Mimer SQL Mobile now available on Symbian OS

**Uppsala, Sweden – 21 April 2004 – Mimer Information Technology AB today released Mimer SQL Mobile for Symbian OS™, the open global industry standard operating system for advanced mobile phones. With the availability of Mimer SQL Mobile for Symbian OS, it is now possible to use a full-fledged relational database on smartphones from the world's leading mobile phone manufacturers including Motorola, Nokia, Samsung, Siemens and Sony Ericsson. A development and evaluation version of Mimer SQL Mobile for Symbian OS is available for free download from the Mimer SQL web site.**

By extending its Mimer SQL database technology to Symbian OS, Mimer Information Technology makes it possible for software developers to build advanced mobile database solutions for mobile phones. Mimer SQL Mobile for Symbian OS is a full-fledged DBMS server with support for data compression, multimedia data (e.g. MMS) and standard interface connectivity. The product also includes features like multi-user database access and 100% industry standard SQL -- full transactional support, stored procedures and triggers -- features otherwise only found in high-end DBMSs. Mimer SQL Mobile also includes support for efficient and economical mobile client access to database servers using e.g. GPRS, 3G or Bluetooth, making it possible to offer database services to large numbers of mobile clients simultaneously communicating with server databases.

“We see a large potential for Mimer SQL Mobile on Symbian OS since time to market is very important for all solution providers, and by using Mimer SQL Mobile, they can develop more feature-rich solutions for Symbian OS-based mobile phones in a shorter time.”, said Stefan Eck, Product Manager, Mimer Information Technology. “The open standards of Symbian OS together with Mimer SQL’s interoperability and high conformance to database standards is a very attractive combination.”, concludes Stefan Eck.

A beta version of Mimer SQL Mobile 9.2 for Symbian OS is available for free download from the Mimer SQL web site [www.mimer.com](http://www.mimer.com).

### **About Mimer Information Technology AB**

Mimer Information Technology is a world leader in the field of zero maintenance DBMSs. The three products in the Mimer SQL family Mimer SQL Mobile, Mimer SQL Embedded and Mimer SQL Engine are primarily targeted at developers of volume products.

The company is part of the Upright Group.

Mimer SQL Mobile is a zero maintenance multi-user DBMS that enables you to deploy complete database applications on hand-held devices, mobile phones and other small appliances. Mimer SQL Mobile can also transform your handheld device into an application server for multiple clients.
