

Teleca provides Symbian OS and Series 60 mobile phone applications for Intel PXA27x Processor Family

Teleca announced today it will supply leading Symbian OS and Series 60 support for the Intel® PXA27x family of processors aimed at customers developing mobile phones, PDA's and other wireless devices. This new technology provides additional performance for 3D games and advanced video while improving battery-life.

This effort has been made possible by Teleca's recent appointments as a Symbian Independent Design House (IDH) and a Series 60 boutique. With these agreements, Teleca has the capability to develop reference platforms and complete mobile phone designs for Series 60 licensees across GSM/GPRS, CDMA, WCDMA and multimode technologies.

Teleca has applied its expertise to develop a Series 60 solution on Intel's development platform for the Intel PXA27x processor family. Teleca has integrated applications that execute high performance gaming, multimedia and telephony capabilities based on the Series 60 User Interface, demonstrating the powers and flexibility of the Intel PXA27x platform. The Series 60 Platform is a terminal software, optimised for Symbian OS that Nokia licenses to mobile handset manufacturers.

"We are delighted to work with Intel with regards to the Symbian OS and Nokia Series 60. Our Nokia Series 60 Boutique status has given us the ability to extend our competence on the Intel XScale family of processors and support Intel XScale technology-based mobile phone developments globally." says John Cooper, director, Smart Phones Business Segment at Teleca.

"Teleca's solution provides our customers with the unique capability of creating optimised Symbian OS-based applications for our Intel® PXA27x family with Intel® Wireless MMX technology," said Mark Casey, director of marketing for Intel's Cellular and Handheld Group. "Customers can take advantage of the power and performance features of the Intel PXA270 processor, while consumers will enjoy a better user experience through longer battery life and increased multimedia capabilities."
