ReadSoft shows companies how to save money at full day event on electronic invoice processing

For the third consecutive year, ReadSoft gathers the most knowledgeable people and companies within electronic invoice processing for a conference and exhibition. The event takes place in Stockholm's IT hub Kista and displays the leading solutions on the Swedish market. The aim is to educate visitors about the tremendous business benefits made possible by technology for electronic invoices processing.

Following two successful conferences in 2002 and 2003, ReadSoft once again gathers the leading players on the invoice handling market for a full-day seminar. During the seminar, attendees will be able to listen to customers' stories and compare the different system solutions available on the market.

"We are pleased to join forces with our experienced partners in this event. Together we are here to display the huge benefits made possible by truly valuable IT solutions. The conference aims to give several hundreds of participants a fascinating, educational and fun experience, which will also improve their financial processes", says Lars Thunqvist, President of ReadSoft Sweden.

What is ReadSoft DOCUMENTS for Invoices?

The software is designed to recognize unstructured invoice documents and capture data such as sender, invoice number and invoice amount from anywhere on the invoice. At the same time, the software checks the data against information in the customer's business system. Approximately 100 million invoices are processed every year by ReadSoft software around the world and it was the first solution to be certified by SAP. 150 customers have already integrated the software with SAP R/3, making it the most widely used invoice processing integration by far. In total, ReadSoft has over 1000 Invoice-processing customers worldwide.
