

## **MultiQ lands order for new products to Norsk Tipping at a value of approx. 11 million SEK**

**MultiQ has received a supplementary order for specially designed monitors for IVT (Interactive Video Terminals) systems to be delivered via EssNet Interactive AB to Norsk Tipping. The order, which initially was valued at approx. 80 million SEK, has now been increased with products at a value of an additional approx. 11 million SEK.**

The order is for more of the complete modules in the sizes of 17" and 19", which are built into Norsk Tipping's gaming machines. More than half of the modules will be delivered with a touch function. Norsk Tipping will replace over 10,000 gaming machines throughout Norway during the next two years.

The order also includes standalone screens for system monitoring on those premises where there are more than 4-5 gaming machines. Deliveries will begin during the fall of 2004 while most of the deliveries will be made during the first half of 2005.

It is gratifying that Norsk Tipping and EssNet Interactive AB also have chosen MultiQ products for other projects, as in this case for system monitoring. We take this as testimony that both our products and our way of working as suppliers is appreciated by our clients. With the outstanding orders currently in hand and the future activities planned by the company, targeting among others the gaming industry, MultiQ's future is looking very bright, says Jonas Wästberg, MD MultiQ International AB.
