

NOTE and Synective Labs sign cooperative agreement

NOTE has signed a cooperative agreement with Synective Labs. The agreement will enable NOTE to offer its customers even greater expertise in the development of advanced electronics and software.

The cooperative arrangement is a part of NOTE's efforts to strengthen the Group's technology offering in specific fields.

"We are seeing increased demand for cutting-edge technology design and electronics solutions, and this cooperative agreement will help us meet our customer's wishes," says NOTE AB Sales and Marketing Director Patrik Kvarnlöf.

Synective Lab's mission is to develop advanced products and systems involving the use of programmable logic, FPGAs, as fast replacements for traditional software solutions and logic systems. These solutions deliver extreme performance and are highly reliable, while reduced silicon use at the same time results in lower production costs.

"The cooperative arrangement with NOTE gives us greater opportunity to offer total solutions, where together we can cover the entire chain, from development to production and product maintenance, thus enabling us to reach new customer groups," says Synective Labs Marketing Director Magnus Peterson.
