Axis cooperates with Honeywell to provide remote monitoring solution to service provider in Taiwan

Axis Communications has partnered with Honeywell to provide a remote monitoring solution to a telecom service provider in Taiwan. Using Axis camera products with Honeywell software systems and engineering services, the service provider can detect and repair system malfunctions remotely via the Internet.

Axis Communications and Honeywell are installing a remote monitoring solution. For Axis the value of the initial order is approximately 450,000 US dollars. The system will give substantial cost savings to the operator that for competition reasons can't be named. Interrupted service is a costly thing for the operators. By remote video monitoring over the Internet many problems can be solved much faster and more efficient than dispatching service personnel.

The Taiwanese telecom market is a fiercely competitive one for which quality of service is the prime differentiator. By using the Axis-Honeywell solution the IT Center at company headquarters can keep a constant watch on the equipment remotely, accessing real-time images and data over the Internet and also be alerted in the event of an operational problem.

About Axis

The Axis Communications Group with the parent company Axis AB is a leading company in network connectivity and emerging wireless Internet-based services. The company is at the forefront of developing network appliance solutions that enable people and organizations to get easy and immediate access to devices and services. Axis is one of the global leaders in several key thin server and network device markets, such as printer, storage and video connectivity, and is doing pioneering work in the rapidly expanding markets of wireless and mobile communications. Founded in 1984, Axis employs more than 500 people worldwide, including the subsidiary 59 percent owned Netch Technologies. Axis is headquartered in Lund, Sweden and has a total of 28 offices throughout North America, Asia and Europe.
