Press Release:

Secured eMail AB, a recognized leader in the encryption industry, today announced the worldwide release of the Simple Encryption Platform, SEP

Stockholm -- September 18th, 2006 -- For many years companies have been trying to piece together content security solutions, using a mix of different point solutions for gateway email, disk and file encryption. This piecemeal method creates basic management issues with security policy enforcement and operational systems management, which in turn leads to high overall cost of ownership.

The Simple Encryption Platform (SEP) provides a framework for granular encryption policy management by individuals or groups with automated control across multiple applications such as email and file/folder encryption. Secured eMails patented technology provides the easiest to use framework for encryption, compliance, shared user management, policy and automated control of any type of data across multiple type of devices. It can be deployed in a matter of hours and handle thousands of users in an instant.

"We are providing the perfect solution for companies that have high value, sensitive information dispersed across the organization. Companies easily encrypt information to reduce the risk of privacy breaches and compliance violations. SEP enables a centralized point for managing all forms of digital business communication" says Peter Davin, CEO and Founder of Secured eMail"

SEP allows enterprises to integrate new encryption applications quickly and easily, profiting from the benefits of a unified management console and resulting in high Return of Investment (ROI) over time by reducing operational costs and freeing up IT resources.

Secured eMail will be exhibiting at InfoSecurity Stockhom from 19th-21 st of September Please visit us at Stand B01:41

About Secured eMail:

Secured eMail is a recognized leader in providing encryption solutions that secure data at rest and in transit. Our promise is **Secured Content Management. Simplified.** Our mission is to provide security technology that people actually can and will use. Secured eMail helps users secure email, files, folders, disks, USB sticks and mobile terminals without forcing users to change the way they work, while giving IT departments' complete control of user rights.
