It is proposed that the Board of Directors is authorized to decide on the details of the option programs. To secure purchase options the Board of Directors proposes that the Annual General Meeting of Shareholders authorize it to issue 250 000 warrants to a subsidiary. Every

**About Diamyd Medical**

Diamyd Medical is a Life Science company focused on developing treatments for diabetes and its complications. The Company's furthest developed project is the GAD-based drug Diamyd® against autoimmune diabetes. Diamyd® has demonstrated significant and positive results in phase II clinical trials of both type 1 and type 2 diabetes patients.

GAD65 is a dominant autoantigen in autoimmune diabetes and is the active substance in Diamyd®. GAD65 is also an enzyme that converts the excitatory neurotransmitter glutamate to the inhibitory transmitter GABA. In this context GAD may have an important role not only in diabetes, but also in several CNS-related diseases. Diamyd Medical has an exclusive world-wide license from the UCLA in Los Angeles regarding the therapeutic use of the GAD65 gene.

Diamyd Medical has outlicensed the use of the GAD65-gene to Neurologix Inc., New Jersey, for treatment of Parkinson's disease and clinical Phase I studies are ongoing.

Other projects comprise drug development within gene therapy using the patent protected NTTDS system (Nerve Targeted Drug Delivery System). The projects mainly make use of Enkephalin and GAD and are targeted for chronic pain e.g. diabetes pain or cancer pain. All projects in this field are in preclinical phases.

Diamyd Medical has offices in Stockholm (Sweden) and in Pittsburgh (U.S.A) and its shares are quoted at the Nordic Exchange (NOMX:DIAM B).
