PRESS RELEASE

## **Nordic region's leading venture capital company accelerates pace of investment:**

### **SEK 200 M in investments in May and June**

**Since May, Emerging Technologies has carried out some ten investments with a total value of approximately SEK 200 M in network economy companies. Several of these investments have been made in the wireless communications segment.**

Emerging Technologies' investments include the following:

- *Brain Dock*, which develops and markets e-commerce solutions for the mobile sector,
- *Purple Technologies*, which sells software to the wireless software industry,
- *Civista*, which will construct and integrate customized mobile platforms,
- *Pocit Labs*, which manufactures solutions for wireless terminals,
- *Todos Data Systems*, which manufactures products including smart-card terminals and ISDN products for home use, and
- *Adventuro*, a portal for adventure sports and adventure travel.

"We are maintaining a high rate of investment and see many interesting investment opportunities in a market which we believe will virtually explode in the next few years. Mobile development is proceeding very rapidly, both in terms of market penetration and technological progress. As a result of our geographic base and the breadth and depth of our network, we have excellent conditions for achieving a leading position in this segment," says Peter Sandberg, ET's CEO.

Investments have also been made in existing portfolio companies, such as the portal *Oppido*, and the e-commerce company *Dressmart*.

*Emerging Technologies AB is northern Europe's leading venture capital company within the network economy, with strong focus on the Internet, mobile applications and infrastructure.*
