

Introduction of Carisolv™ on the markets in Belgium, Israel and Hungary

MediTeam is preparing the introduction of Carisolv on the markets in Belgium, Israel and Hungary. The distributors have been appointed and the product registrations are complete. Market preparations are well under way.

Carisolv will be marketed in Belgium by Henry Schein Hospithera nv in Brussels, one of Belgium's leading dental companies. Henry Schein Hospithera will be marketing Carisolv using a combination of its own sales force and catalogues, which will be sent to many dentists in Belgium. Carisolv has already been introduced at Belgian schools of dentistry.

On the Israeli market, Carisolv will be introduced by H.A. Systems Ltd., Ramat.Gan, a rapidly expanding and successful dental company specialising in modern dental products. The company currently markets 12 different product systems, including Emdogain from Biora and dental implants. Carisolv will be launched during the autumn. During the spring, H.A. Systems introduced Carisolv at leading clinics in Israel.

When it comes to the market in Hungary, Dental Express, Dunakesi, one of Hungary's leading dental distributors, will be introducing Carisolv after the summer.
