## Telelogic Announces Capgemini Framework Support

### Telelogic System Architect Is First to be Awarded Preliminary Certification by Capgemini for Support of its Integrated Architecture Framework (IAF)

**MALMÖ, Sweden and IRVINE, California – March 12, 2008** – Telelogic (Nordic Exchange/MidCap/TLOG) today announced that Capgemini, one of the world's foremost providers of consulting, technology and outsourcing services, has awarded Telelogic System Architect® preliminary certification for support of the Capgemini Integrated Architecture Framework (IAF) ®. Telelogic System Architect is a leading enterprise architecture and business process analysis solution.

Telelogic System Architect is the first enterprise architecture solution to be preliminarily approved in Capgemini's framework certification process. Capgemini consultants worldwide will be able to take advantage of the benefits of Telelogic System Architect in their projects. System Architect offers customized templates and diagrams that are pre-configured to support all levels of the IAF. This integrated support simplifies and accelerates the deployment of the IAF by automating the creation of scenarios and supporting documentation in a traceable and extensible repository. In addition, System Architect's central repository helps reduce errors and related costs by offering a standard approach to enterprise architecture across all of Capgemini. By using System Architect, users can simplify the maintenance and enhance the integrity of the large volumes of information being collected and analyzed.

"By combining a tool like System Architect and the Capgemini IAF, our consultants gain the ability to work smarter on their enterprise architecture projects," said Bernard Huc, Architects Community Global Leader at Capgemini. "They will have access to a leading solution that automates the collection, analysis and sharing of information across the organization and with clients. With System Architect's integrated support of this framework, we will gain improved traceability and use of a standard format across all projects. System Architect should go a long in improving productivity, delivering fact-based decision making, and efficiently delivering project results to our customers."

“Telelogic has always been committed to supporting major enterprise architecture frameworks and standards,” said Greg Sikes, executive vice president, Modeling Solutions Product Division, Telelogic. “The addition of Capgemini IAF support extends our framework support into a new area. It builds on 20+ years of enterprise architecture framework support, starting with Zachman and now encompassing telecom, retail, defense, civil government, business/open source and other industries. We are proud to be the first to provide this support to Capgemini, one of the leading consulting organizations in the world.”

System Architect helps organizations more fully deploy, visualize, collaborate on, and scale their enterprise architecture and business process analysis initiatives. Capgemini IAF support is available now. For more information, visit [www.telelogic.com](http://www.telelogic.com).

### **About Telelogic**

Telelogic is the leading global provider of software solutions for Enterprise Lifecycle Management (ELM). Award-winning Telelogic software helps customers design, develop, and deliver the world’s most advanced and innovative products, systems, and software more efficiently by aligning and optimizing development lifecycles and business processes with business objectives and customer needs. Telelogic helps customers improve quality and predictability while reducing time-to-market and overall costs. Headquartered in Malmö, Sweden with U.S headquarters in Irvine, California, Telelogic conducts business in more than 40 countries. More than one third of the Fortune Global 500 companies use Telelogic software including market-leading aero/defense, automotive, financial services, software/electronic and telecommunications companies and governments worldwide.
