Sygn Software short-listed for project in Oman

Cambridge-based software vendor Sygn Software's application for information management – Sygn Manager™ is of immediate interest for a project in Oman on the Arabian Peninsula. The national telecom company, Oman Telecom, is looking for a system to modernize and rationalize its information management. Out of 25 offers, Sygn Manager™ is left on the short-list together with five other competitors for a closer check-up.

Sygn Software's tender was given in cooperation with a local IT-company, Oman Computer Services (OCS) lead by Swedish General Manager Sylve Eriksson.

- We can feel there's a great demand for this kind of products in the Middle East now. These countries are about three years after the leading nations like U.S, U.K or Sweden regarding development in the IT- and Internet-area, but they are coming strongly now. We believe the authorities and ministry in Oman might find Sygn Software's unique solution of 'webifying' the information management very interesting as well, said Sylve Eriksson

OCS acts as a regional agent for Sygn Software in the Middle East. Presently, a number of initiatives concerning IT and Internet are taken in the Gulf – for instance are competence centers built up, and Sylve Eriksson hopes Sygn Software will play an important role here.

In the end of September, a delegation from Sygn Software will meet the tender committee of Oman Telecom for a thorough introduction to their application Sygn Manager™.
