Excosoftware Announce the Availability of Excosoftware Content Manager

Easy to use and easy to deploy, Excosoftware Content Manager is a flexible and scalable document management system that enables organizations to manage vast amounts of business critical information with support for creation, administration, storage, publishing, and workflow.

Kista, Sweden - October 4, 2000 - Excosoftware AB, a leading provider of content management solutions, today announced the availability of Excosoftware Content Manager, a fast, flexible and scalable document management system. Excosoftware Content Manager is the first of three of the company's planned packaged offerings, which also includes Excosoftware Web Publisher and Excosoftware Documentation System. A common feature of each offering is that they all leverage the latest Web technology to enable organizations to create, update, reuse, repurpose, and publish business critical information.

The major benefit of Excosoftware Content Manager is that it reduces for an organization the 'Total Cost of Ownership' of business critical information. This information is typically unstructured and as industry analysts highlight, the management of unstructured information is increasingly a problem for businesses today. This trend is set to continue for the foreseeable future. The Yankee Group, for example, has predicted that the amount of unstructured information to be managed is increasing at a rate of 200 percent per year.

"The main objective of Excosoftware Content Manager is to solve the 'unstructured information' problem that faces so many businesses," said Jacob Tellgren, Product Manager for Excosoftware. "What Excosoftware Content Manager does is to enable everyone within an organization to turn the information they own into a Web-based resource that can be shared across organizational and geographic boundaries"

"What the customer is offered is a complete package, with training and maintenance bundled together with Excosoftware's proven content management software," Tellgren explained. "The gain for our customers is that they can quickly capitalize on the new business opportunities and competitive advantages of XML and the Internet."

Available immediately, Excosoftware Content Manager enables businesses to cost-effectively communicate and coordinate information across globally distributed business units, as well as with their customers, partners, and suppliers. Flexible and scalable, Excosoftware Content Manager manages vast amounts of unstructured information with support for creation, administration, storage, publishing, and workflow. Excosoftware Content Manager is a standards based content management system, which being designed to integrate with existing systems can be deployed quickly and easily. Moreover, the modular architecture of Excosoftware Content Manager can be easily tailored to meet the specific requirements of an organization for performance and functionality.

About Excosoftware

Excosoftware, Kista, Sweden, is a leading provider of content management solutions. By leveraging Web technologies, such as WebDAV and XML, Excosoftware helps their customers streamline the management of corporate information and stay competitive in fast moving markets.
