

Press release

Ericsson Radio Systems AB has commissioned Technology Nexus AB (publ) to develop secure web systems for accessible information.

This task involves Technology Nexus AB (publ) taking complete responsibility for the development of a web system to deal with accessible information from GSM radio base stations supplied by Ericsson all over the world.

Operators will have access to accessible information via Ericsson's extranet. In this context, accuracy and integrity are of utmost importance.

"This order reaffirms our position on the market as a total supplier of secure e-business solutions. Over the course of several development projects, Nexus has built up a unique expertise in web systems based on secure extranet solutions," says Mats Enquist, Executive vice president, Technology Nexus AB.

Now that e-business solutions have definitively been established as a natural part of B2B business, there is a huge requirement for dealing with information and documents in secure manner over the Internet. In this case, 'secure' means accessibility, accuracy, traceability and confidentiality.
