

## PRESS RELEASE

### LGP LAUNCHING 3G PRODUCT LINE

**LGP's Tower Mounted Amplifier (TMA) system including singleband, multiband and fullband versions for 3G mobile communications networks is now available.**

The new 3G TMA product line from LGP Telecom provides the market's most data speed enhancing and cost efficient infrastructure solutions for 3G networks.

LGP TMA UMTS is developed to stand up to the demands of enhanced data rate and capacity, as well as increased coverage in 3<sup>rd</sup> generation network. The filtering in the product is developed to reject the high interference levels from other closely located base stations e.g. competitor signals. The new TMAs from the 3G-product line are offered to system suppliers and operators with a choice of different gains and as single, multi or full band versions.

LGP TMA UMTS is intended to be installed outdoors in towers or on walls close to the antenna. All LGP TMA's size and weight is minimised to facilitate installation and to be weather proof according to official ETS classifications. The design also enables the TMAs to a hidden mounting behind the antenna to minimise tower pollution.
