

Product from SCN Has Effect on the H1N1 Virus

In previous press releases, Scandinavian Clinical Nutrition (SCN) has described positive results from a study where the patented product Immulina has been tested against the influenza virus H1N1, which now has been tied to the swine flu.

The study results showed that taking Immulina caused a significant reduction of both clinical symptoms and lung tissue damage after infection by the influenza virus H1N1, the cause of the new swine flu epidemic, compared to placebo. The study was conducted during 2008 at Louisiana State University in USA, and animal studies have also been conducted at Karolinska Institutet in Stockholm.

Immulina has been developed at the National Center for Natural Products Research at the University of Mississippi. Studies on Immulina and its immune stimulating effects on humans have also been conducted at Rigshospitalet in Copenhagen and the University of Copenhagen, and the results have been published in scientific journals.
