

KEEP PETS COOL WITH A TASTE OF THE TOP LIFE!

Pamper your pooch this summer with the nutritious and highly digestible Top Life Formula. You may have heard of it already, Top Life is a goats' milk treat for puppies and adult dogs. Top breeders have reared their pups on goats' milk for years and know the benefits it can bring.

At our local agricultural show earlier this month, we had a stand allowing puppies and dogs (and even a ferret!) to try Top Life Formula. One dog named Milo who visited the stand on a number of occasions managed to escape from his owners and find his way back to the Top Life stand! We couldn't believe it, but we were so glad to find him commented his lady owner. He was obviously thirsty for more!

Top Life Formula for puppies is goats' milk with added vitamins and cream to give them a boost in their younger months. Top Life Formula for adult dogs is also made from goats' milk with added glucosamine and chondroitin for healthy joints.

Many dog owners don't like the idea of giving milk to their pet because it upsets their stomach. This can be true of cows' milk just as some humans are lactose intolerant so are dogs. However, goats' milk is different highly digestible and will give man's best friend an extra spring in his step.

Why not keep an eye out for Top Life Formula when you're next in the supermarket? It's available in Tesco, Asda and Morrisons in the pet aisle. It can be given as often as your pet requires, but in the warm spell we're currently experiencing, it's great for quenching their thirst. Your dog will love you forever!
