## LightMate® Blåfiber

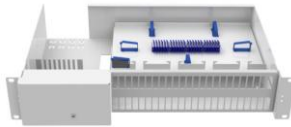

**LightMate® blown fiber ODF is the market's only ODF where you can blow fiber from the front. Other feature of the products is that they are robust, easy to handle, reduces installation and maintenance time and come complete with accessories.**

LightMate blown fiber ODF for connecting and splicing fiber optic cables for FTTx (Fiber to the x) can be installed in both P2P (Point to Point) and GPON (Gigabit Passive Optical Network) fiber network.

Blown fiber works by the fiber package is installed in the small micro-tubes with the help of air. The installation method makes it possible to easily upgrade or replace the fiber, which means you do not have to anticipate their future needs now. Instead, place your tubes containing microtubules and install the number of fiber that you need today. When upgrading old fiber it can easily be blown out and quickly replaced with new.
