

## Prestigious Quality and Environmental Certifications for Kent company, RGVA

**RGVA, a leading vehicle branding specialist has been awarded ISO9001 and ISO14001 placing it as one of the UK's best credentialed companies.**

Recognised internationally, the certifications cover all aspects of an organisations supply chain, from initial procurement and supplier vetting to client satisfaction and environmental impact monitoring. [RGVA](#) is the only Vehicle Branding company in the UK to be awarded both certifications. Less than 3% of UK businesses hold both standards, with fewer than 1% having gained ISO14001.

“RGVA made the changes necessary to be awarded these [ISO](#) certificates to demonstrate its commitment to quality and environment” **said Ian Calderwood, Managing Director** “I’m pleased that my company and its team have yet again set another first in our industry. We were the first graphics company in the UK to offer a solvent-free graphics option and we are now the first vehicle branding specialist to achieve ISO14001. These awards show our continued commitment and ability to innovate and be best in what we do – which is every aspect of vehicle branding”.

RGVA vehicle branding has been headquartered in Kent, South East England for more than a decade, and is about to move to new, larger premises in Bearstead, Kent, just off junction 8 of the M20. The new premises will allow the company to expand its graphic production operation using water based inks.

RGVA are a leading vehicle branding specialist, supplying decals, cut graphics, wraps and livery solutions to companies across the UK. They pride themselves on being a Kent company, however, for many years have been designing, supplying and managing branding for national fleet clients such as Sainsbury’s, ASDA, Michelin and Müller Dairies. RGVA offer environmentally friendly graphics and are the first vehicle branding specialist to achieve both ISO9001 and ISO14001 standard certification. RGVA also sells [Traxx®](#), a patented quick-change truck frame system that was developed in 2004 by RGVA directors Ian Calderwood and Richard Penn. There are now more than 9000 trucks operating with this system worldwide. Users include Sainsbury’s, Culina Logistics, Carpet Right and Michelin.
