

PRESS RELEASE - Söderköping, December 2011

## **HTC introduce a new innovative dust extractor**

**HTC are excited to introduce the new revolutionary HTC 80 iD. This new dust extractor increase the productivity with up to 15% compared to traditional dust extractors. The HTC 80 iD is equipped with a unique pre-separator that, despite its compact size, removes up to 95% of the dust. With HTC 80 iD the productive time for a flooring contractor will be increased.**

All companies looks for ways to make their business more profitable. The core focus for HTC is to keep developing the ultimate flooring system and with the new HTC 80 iD we take the next step towards that vision. HTC believe in a system where all parts are made to match. HTC 80 iD is a dust extractor designed for high capacity floor grinders, such as HTC 950, 800, 650.

The HTC 80 iD can be used in various ways depending on your setup. For maximum efficiency and output, a remote controlled grinder from HTC is recommended. The unique bypass valve leads to continuous operation, something that with conventional dust extractors has been impossible. However, a traditional grinder without remote control still benefit greatly from the double Longopac<sup>®</sup>, the high performance integrated pre-separator and the ability to use the remote control, an optional feature, to turn the dust extractor on & off from a distance.
