

Systecon assists FMV in the design of logistic support solutions for Sweden's Helicopter 14

The employee owned consultancy and software company Systecon AB has recently received an order from FMV (Swedish Defence Materiel Administration) for continued consultancy services in the ILS area (Integrated Logistics Support) of Helicopter 14. The order includes approximately 7000 man-hours until the fall of 2013.

When the HKP 14 system now enters from development into production and operation, Systecon will assist in the design of maintenance solutions, acquisition of support resources and procurement of contractor logistics support. HKP 14 is the Swedish name of the NH90, which is in delivery by NHIndustries to many nations, and much of the ILS work is done in international co-operation. This opens up new possibilities for cost-effective solutions.

Systecon's Head of Business Area Defence, Olle Bååthe comments:

"It is very stimulating to work with such a technically advanced system as the HKP 14, and we are very pleased with the project's continued confidence in our services."
