Press release

PMC Group sets up new hydraulics company in Poland

The PMC Group has set up a new company, PMC Hydraulika Sp.z.o.o, in Szczecin, Northwest Poland. The company focuses on assembling hydraulic and lubrication systems and delivered its first systems in December 2011.

“The new company gives us unique opportunities to offer both existing and new customers systems produced locally in Poland and Central Europe. Above all, this means shorter lead times, but it also means lower costs,” says Patrik Olsson, who is responsible for setting up the new company and is also CEO at PMC Hytech AB, Ystad.

The investment in Poland is a natural progression of the globalisation of the PMC Group. In addition to operations in Northern Europe, the Group also has manufacturing units in China, the US, Qatar and India.

For further information, please contact:
