PROACT

The city of Vlašim relies on a solution from Proact

Czech Republic, 10 February 2012

The city of Vlašim required a comprehensive virtual server solution including a data storage facility and back-up system. The existing solution was outdated and no longer technologically suitable.

The city of Vlašim opted for a solution from the storage specialist Proact. The solution is based on server virtualisation with VMware, disk systems, fibre channel-SAN and backup to disk. A virtual server farm (application servers, document serves, operation of all city services) is connected to the fibre channel-SAN structure together with two disk systems. One of the disk storage systems is used for primary data, while the second disk system is used for data backup. The backup is performed using D2D (disk-to-disk) software.
